Method of producing a compact representation of a data package, the data package comprising at least one of meta-data and associated data elements and meta-data and associated data packages, where the meta-data comprises at least one of name and type identifications for the data element and name and type identifications for the data package, comprising the steps of:

- a) arranging of the data packages in a sequence;
- b) searching of the meta-data for defined, non application-dependent name and type identifications; and
- c) representing the identifications found in step b) by replacing the identifications with defined substitutes which require little storage space, as claimed in claim 1.

The prior art of record, White et al (U.S. Patent No. 6,438,559), Kumar et al (U.S. Patent No. 6,343,287), Hohle et al (U.S. Patent No. 6,101,477), and Shaw et al (U.S. Patent No. 6,362,836) do not disclose, teach, or suggest the claimed limitations of (in combination with all other features in the claim):

Method of producing a compact representation of a structure of meta-data and data elements, with the correlation of meta-data with data, comprising data elements or a sub-structure of a structure being performed by a program and with the meta-data comprising at least name and type identifications for the data, comprising the steps of:

- a) combining of meta-data and associated data to form a plurality of data packages;

Art Unit: 2175
